

INVENTORY CONTROL

> Glovia Reports

Based on Right Reporter Enterprise, it contains customized meta-data geared around the Glovia database. Its pre-imported Glovia database allows Glovia inventory administrators to start creating reports immediately.

The application comes with over 50 pre-built reports.

> Inventory Reports

Created around Right Reporter Enterprise, Inventory Reports contain customized meta-data geared around the Northwind database. Its pre-imported Northwind database enables Northwind inventory administrators can start reports immediately.

Right Reporter can also be integrated with any other inventory related database.

GOVERNMENT

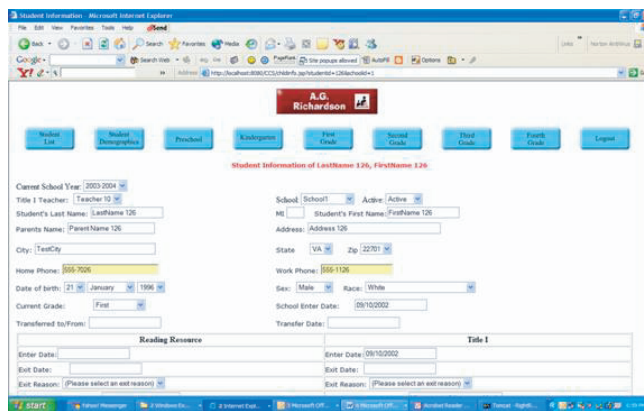

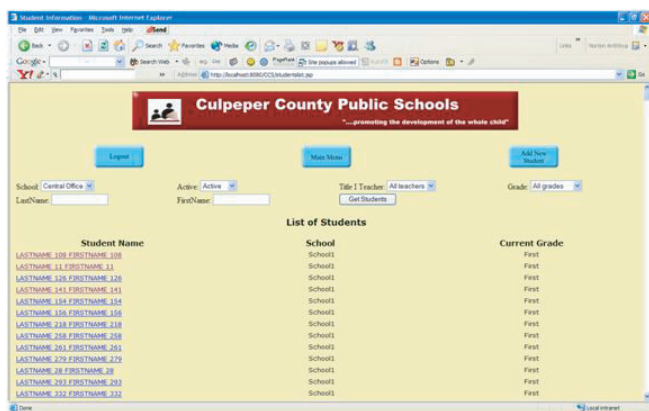

> EPA Reports

The EPA Reports solution allows users to download and import the EPA's application STORET data into other databases to allow for detailed reporting of various non-biological physical, and chemical result data, biological results and habitat results information.

Once the database is downloaded, Right Reporter allows a variety of reports to be defined and printed. For ease of use, EPA Reports also contains predefined reports and exported database descriptions.

> Water Reports

Water Reports is a data capture system that connects databases such as FoxPro that are created and installed by transducers at the stations. The system allows users to configure the data import tools to consolidate files and database tables into the reporting system.

Consulting

Avman's consulting team focuses primarily on adapting and creating reporting solutions that utilize its proprietary Right Reporter technology. The consulting team works closely with clients to understand their requirements and add new features and modules to fit specific organizational needs. In addition, the team helps migrate data, create interfaces with existing systems as well as create entirely new applications. Its clients include and Real.org, Networkmantra, Uniplus Consultants, Global Commerce & Information.
